Solid Waste Pollutants and its Decadal Growth in Jamshepur City

Md. Reyaz* & Nigar Alam**

All towns are more polluted in India and in South East. The level of Pollution is far more hazardous in industrial. The proportion of solid wastes goes up the dangerous of these towns. The generation of various types of wastes continuously increasing. The wastes are mainly residential, commercial and medical in nature. Every day of industrial town produces large amount of solid wastes is always higher than the other towns. The amount of high industrial wastes is due to the thousands of small scale industries in this region are mineral processing various types of raw materials. A industry dealing with heavy metals produces amount of waste materials.
