Abstract

Women are essential to sustainable development. As socializers and educators, mothers must teach children to respect and safeguard natural resources. Women need more support to engage fully in the "green economy" and have their environmental policy ideas considered. Expand women-specific training and capacity-building programs. Women must be freed from socio-cultural and theological constraints to stimulate sustainable development. Conventions bar women from leadership. A paradigm shift is needed, especially among dominating males.

Introduction

For sustainable development to take place, there must be a just distribution of resources, both now and in the future. This objective is impossible to reach without ensuring gender equality. Women's empowerment is essential to long-term success in all areas of development, including the economy, society, and the environment.

To meet the requirements of the present without compromising the potential of future generations to do the same is an overarching definition of sustainable development. This is the crux of eco-friendly progress. One of the driving concepts of all policies and actions should be sustainable development in order to create a society that is founded on freedom, democracy, and respect for fundamental rights, fostering equality of opportunity and solidarity within and between generations. Whatever the ultimate purpose of the policies and activities, this must be the case.

The cornerstone for sustainable development should be a high standard of education and social growth, as well as a high standard of environmental protection and improvement. This should be based on a social market economy that is highly competitive and aims to achieve full employment, as well as on balanced and stable economic growth.

All national policies should have as their major goal the promotion of sustainable development, which in turn seeks to improve the quality of life on Earth for present and future generations. It's about ensuring sure the planet can sustain a wide variety of living forms much into the future. It is based on democratic principles, the rule of law, and the recognition and protection of individual liberties and the right to equal opportunity. It promotes unity not only within a given age but also across generations. It hopes to promote a prosperous economy with high rates of employment and education, health protection, social and territorial cohesion, and environmental protection in a peaceful and secure global community that values the unique contributions of all cultures.
